

ATV meal and pellet feeder for Ireland, UK and Europe

Feed Train ATV Feeder

The ATV Feeder turns the ATV already working around the yard into a practical feeding machine. It is designed to reduce bucket work, speed up regular feeding rounds and give controlled delivery into a meal bin or feeding area.

The original Feed Train source sheet lists this as a 1000 lb model. For European buyers, that is approximately 454 kg source capacity. Final working capacity can vary by feed type, so Peter can confirm suitability before ordering.

Door-to-door delivery can be arranged across Ireland, the UK and Europe. Shipping is quoted directly by Peter based on destination and current courier route.

Key Specifications

Approx. 454 kg	Source capacity
Approx. 10 cm	Auger
Approx. 183 cm	Overall width
Approx. 244 cm	Overall length
Approx. 147 cm	Overall height
Approx. 90 cm	Chute height
Approx. 31 cm	Hitch height
Approx. 4.6 m	Control cord

Why It Works On Farm

- | Suited to meal and pellets, with a 10 cm auger serving several feed types.
- | One-speed dispensing listed at approx. 19 litres of volume per 6 seconds, depending on feed type.
- | Circuit breaker protection on the electronics.

- | Batteries and motor are listed as included on the source sheet.
- | Wireless controls are noted on the source sheet; availability should be confirmed with Peter.
- | 2 inch ball hitch source spec, with tyre size listed as 22 x 11.00-8.

Specifications are converted from Feed Train source material and may vary by feed type, options and current European supply. Speak to Peter before ordering to confirm fit, availability, finance and delivery pricing.
